

vRA 7.x custom property hostname not working

If you want to set the self generated Hostname during the Clone Event you must set so properties as follow:

The DnsName is optional, but Hostname and Name must be set

```
var machine = payload.get("machine");
virtualMachineAddOrUpdateProperties = new Properties ();

virtualMachineAddOrUpdateProperties.put('Name', Your_hostname);
virtualMachineAddOrUpdateProperties.put('Hostname', Your_hostname);
virtualMachineAddOrUpdateProperties.put('DnsName', Your_hostname);
```
